BRIEF

**AEVAL**

*Wall - a continuous vertical brick or stone structure that encloses or divides an area of land.*

The first habitat that a man would have lived in would have been a cave. And when he learnt slowly how to make cave like structures that could prevent unwanted natural factors from affecting him, he named it a home. The only barrier that separated him from the nature would have been walls. And walls have since then been used to create a physical blockade to differentiate his own space and the space around him.

The walls that were used to separate him from nature slowly started acquiring new functions. This was to give the man, who lived inside the walls, privacy and let him do whatever he wanted to do with utmost isolation. Then came, the rulers, who started building walls around their area of rule. The scale of the wall slowly started growing big as man became more civilized. The walls that were earlier used for protection slowly started being used for partitions. The needs started growing and privacy started becoming a priority.

Street - a public road in a city, town, or village, typically with houses and buildings on one or both sides.

The street has the potential to become a thriving public space for it can house all activities and it invites everyone else to participate in the same. The width is simply decided by the vehicular accessibility the people need. A street has much more to do than to restrain itself based on the movement of vehicles. This is the most basic and easily accessible public space. The walls that were built during the ancient times separated the whole village from another and thus protected the village from being attacked. But, the houses never had walls that separated them from the streets. Everything happened in the street except certain rituals and resting. The man was completely in the public space. It was not something that he used intermittently.

## BRIEF-

Design a living space that has no walls i.e. no vertical barrier keeping in mind the way this would open up to the environment around it and interact with the public leeway. The maximum number of sheets is 3 A3 sheets. The site chosen has to somehow, connect itself to a public space. The site must not be an island in a sea of public spaces. (Also, the site must not be amidst public spaces.) The site must not be in isolation.
